

Properties

Design	Multi-lubrication friction bearing in rolled bronze
Construction type	The bushes are suitable for rotational and oscillating movements
pv	for grease lubrication: 2.8 N/mm ² x m/s for oil lubrication: 10 N/mm ² x m/s
Permissible load	static: 140 N/mm ² Rotation, oscillation: 70 N/mm ²
Sliding speed max.	1,0 m/s
Friction coefficient	lubricated: 0.05 to 0.15
Thermal expansion coefficient	11 x 10 ⁻⁶ K ⁻¹
Coefficient of thermal conductivity	> 60 W (m x K) ⁻¹
Temp. min.	-50 °C
Temp. max.	150 °C
Surface pressure	140 (≤ N/mm ²)
Material	CuSn8 bronze
Application	Hydraulics
Standard	ISO 3547 DIN 1494

Toleranz / Tolerance				
d	D	L	e	F
f7	H7	±0,25	0 -0,20	±0,50

Note

An initial lubrication with grease is recommended and continual lubrication significantly increases the service life of the friction bearing.
 Peak to valley height of shaft to be observed $Ra < 0.8 \mu\text{m}$.
 Hardness of shaft to be observed $150 < HB < 600$.

Description

- Maintenance-free operation.
- Multi-lubricationable.
- Not suitable for dirty conditions.
- Shock and vibration resistant.
- High permitted load.
- Good friction characteristics.
- No water absorption.
- low play during operation.
- Extremely space-saving.
