## HK 92RV 02 BG2

Gear flow divider, size 2 92RV 2-way

Properties					
Design	with one phase compensation valve and anti- cavitation valve per section external leak oil discharge Adjustment range DBV: 70-210 bar				
Rotational speed range	1200 - 2500 U/min				
Pressure difference	difference max. 30 bar (between the sections)				
Recommended speed	1800 - 2000 rpm				

## Note

Before commissioning the system, the first running-in of the gear flow divider should be under no load.

## Description

This flow divider is used to supply two independent hydraulic circuits with just one pump

Division error approx. 3%

Different pressure settings for each section possible

Valves settable from 70-210 bar, other setting ranges on request

Modification to internal leak oil discharge possible - For this, close off port T with G1/2" blind plug (modification recommended only after consultation!)

After modification to internal leak oil discharge, the integrated suction valves are decommissioned

Configuration of gear flow dividers: qi = Q/z \* 1000/n

qi = displacement/section [cm3]; Q = total intake volumetric flow [l/min]; z = no. of sections; n = rotating speed [rpm]
