

HK 92RV 04 BG2

Gear flow divider, size 2 92RV 4-way

HANSA FLEX

Properties

Design with one phase compensation valve and anti-cavitation valve per section
external leak oil discharge
Adjustment range DBV: 70-210 bar

Rotational speed range 1200 - 2500 U/min

Pressure difference max. 30 bar (between the sections)

Recommended speed 1800 - 2000 rpm

Note

Before commissioning the system, the first running-in of the gear flow divider should be under no load.

-

Diagrams and circuit diagrams essentially valid as schematic diagrams also for 4-way flow dividers.

Description

This flow divider is used to supply four independent hydraulic circuits with just one pump

Division error approx. 3%

Different pressure settings for each section possible

Valves settable from 70-210 bar, other setting ranges on request

Modification to internal leak oil discharge possible - For this, close off port T with G1/2" blind plug (modification recommended only after consultation!)

After modification to internal leak oil discharge, the integrated suction valves are decommissioned

Configuration of gear flow dividers: $q_i = Q/z \cdot 1000/n$

q_i = displacement/section [cm³]; Q = total intake volumetric flow [l/min]; z = no. of sections; n = rotating speed [rpm]
