| | |
|-----------------------------|---|
| Application | Ideal where space is restricted and for highly dynamic movements, handling with industrial robots, linear axes pick-and-place systems |
| degree of evacuation | 85 % |
| Body | Anodised aluminium |
| Integrated | NC blow-off valve, filter, silencer, non-return valve |

Note

Mini-sensor with housing and connection cable, analogue or digital output signal. Minimum size and low weight combined with high measuring accuracy. Further information on request

Description

Purely pneumatic vacuum generator that operates on the Venturi principle. Compressed air enters the ejector at A and flows through the nozzle B. This results in a vacuum immediately behind the nozzle outlet, and air is drawn in through the vacuum inlet D. This air and the driving air leave the ejector via the silencer C.

Additional information

Important: Order two connection plugs per ejector.
