HK BM70 AUTO

Hand-operated directional control valve BM 70 with high-speed function

Properties

Design	Monobloc valve for pipeline installation
Scope of supply	without hand lever (please order separately)
Operating pressure	P, A, B: max. 220bar / T: max. 80bar
Volumetric flow	max. 70 l/min
Connection	P + T = G 1/2"; P2 = G 3/4"; A + B = G 1/2"
Use	especially for use in wood splitters

Note

Log-splitter valve with pressure-dependent switching of splitting speed for maximum splitting force. Function retract / lift with latching (mechanical end switch). With the version with the kick-out function, the valve automatically switches into the mid-setting (stop position) when it reaches the end stop while the cylinder is retracting.

Description

double-action with high-speed function
compact design
