

### Características

|  |  |
|--|--|
| <b>Construcción</b>                    | Anillo guía doble  |
| <b>Velocidad de deslizamiento max.</b> | 5,0 m/s  |
| <b>Presión superficial</b>             | con 20 °C 15 N/mm <sup>2</sup> ; con 100 °C 10 N/mm <sup>2</sup> |
| <b>Temperatura min.</b>                | -30 °C   |
| <b>Temperatura max.</b>                | 110 °C   |
| <b>Medios</b>                          | Aceites minerales  |
| <b>Montaje</b>                         | introducir en la ranura  |
| <b>Material</b>                        | Resina acetal + fibra de vidrio                                  |

### Nota

Cálculo de la fuerza transversal;  $F = p \times D \times L \times n$

F= fuerza transversal máxima (N)

p= presión superficial máxima (N/mm<sup>2</sup>)

D x L= superficie proyectada (mm<sup>2</sup>)

n= número de anillos

### Descripción

elaboración y montaje sencillo de ranura de inserción.

elevada capacidad de carga

Factor de desgaste bajo y escaso coeficiente de rozamiento (entre 0,05 y 0,1) suministrable en muchas medidas.

### Indicaciones para pedidos

Podemos fabricar anillos guía con diámetro desde 20 a 510 mm a corto plazo.
