Kirjeldus

The filling unit protects devices connected downstream by ensuring a gradual build-up of pressure. The unit consists of a 3/2-way valve and a filling valve (start-up valve). It is connected and disconnected by means of the 3/2-way valve. The filling time can be altered by turning the adjusting screw.

Tellimisinfo

Filling units are also available with coil 110 V AC, 50 Hz and in a pneumatically operated version. Please ask for more information.
