

# K-DVST OHNE REGLER

Pressure booster without regulator

**HANSA FLEX**

|                            |   |
|----------------------------|---|
| <b>Omadused</b>            |   |
| <b>Sisendrõhk</b>          | 2 - 10 bar  |
| <b>Väljundrõhk</b>         | Max. 20 bar (regulated: max. 16 bar)  |
| <b>Temperatuuri ulatus</b> | -10 °C to +50 °C (40 mm bore), -10 °C to +60 °C (63 mm bore)  |
| <b>Vahendid</b>            | Filtered, unlubricated or lubricated compressed air (if lubrication is used, it must be continuous) |
| <b>Tihendusmaterjal</b>    | NBR   |
| <b>Rõhuregulaator</b>      | With plastic body   |
| <b>Korpus</b>              | Aluminium, anodised   |
| <b>Toru</b>                | Anodised aluminium jacket   |
| <b>Montaaž</b>             | Any position, with 4 mounting holes   |
| <b>P2:P1</b>               | 2:1   |

## Vihje

For information about calculating the filling times for different tank sizes, refer to the above-mentioned data sheet available on our website  
Lisaandmed saate soovi korral.

## Kirjeldus

Pressure multipliers (boosters) allow a separate compressed air store with up to double pressure to be installed for selected devices in a compressed air system without an external energy source, i.e. it is possible to work with a maximum pressure of 20 bar in a standard 10 bar system (maximum ratio 2:1). This is achieved using a double piston, which is operated by a combination of integrated check valves in such a way that the booster works automatically until the target pressure is reached in a compressed air tank and is then automatically switched off. A tank is always required to build up the pressure and store the compressed air!
