

Omadused

Tüüp	Tihendusrõngas
Töörõhk	kuni 500 baari
Temperatuuri ulatus	PU18: -30 °C bis +100 °C PU33: -40 °C bis + 120 °C

Kirjeldus

ISO standardile vastavaid O-rõnga sooni võib valmistada ulatuslikus mõõtevahemikus. 3,53 mm ristlõigete puhul varieerub soone sügavus ISO järgi vahemikus 2,7–3,1 mm. Kõikide mõõtevahemike parimaks võimalikuks tihendamiseks töötati välja tihendusrõngas, mis asendab traditsioonilised O-rõngad.

Välja vahetatav O-rõngastega, suur ekstrudeerimistakistus ei vaja tugirõngast.
