

K-DVST OHNE REGLER

Pressure booster without regulator

HANSA FLEX

Caracteristici

| | |
|-------------------------------|---|
| Presiune de intrare | 2 - 10 bar |
| Presiune de ieșire | Max. 20 bar (regulated: max. 16 bar) |
| Domeniu de temperaturi | -10 °C to +50 °C (40 mm bore), -10 °C to +60 °C (63 mm bore) |
| Medii | Filtered, unlubricated or lubricated compressed air (if lubrication is used, it must be continuous) |
| Material de etanșare | NBR |
| Regulator de presiune | With plastic body |
| Carcasă | Aluminium, anodised |
| Țeavă | Anodised aluminium jacket |
| Montaj | Any position, with 4 mounting holes |
| P2:P1 | 2:1 |

Indicație

For information about calculating the filling times for different tank sizes, refer to the above-mentioned data sheet available on our website
Alte date sunt disponibile la cerere.

Descriere

Pressure multipliers (boosters) allow a separate compressed air store with up to double pressure to be installed for selected devices in a compressed air system without an external energy source, i.e. it is possible to work with a maximum pressure of 20 bar in a standard 10 bar system (maximum ratio 2:1). This is achieved using a double piston, which is operated by a combination of integrated check valves in such a way that the booster works automatically until the target pressure is reached in a compressed air tank and is then automatically switched off. A tank is always required to build up the pressure and store the compressed air!
