K-DVST MIT REGLER

Pressure booster with regulator

| Свойства | |
|---------------------|-----------------------------------------------------------------------------------------------------|
| Входное давление | 2 - 10 bar |
| Выходное давление | Max. 20 bar (regulated: max. 16 bar) |
| Область температур | -10 °C to +50 °C (40 mm bore), -10 °C to +60 °C (63 mm bore) |
| Рабочие среды | Filtered, unlubricated or lubricated compressed air (if lubrication is used, it must be continuous) |
| Набивочный материал | Нитрильный каучук |
| Регулятор давления | With plastic body |
| Корпус | Aluminium, anodised |
| Труба | Anodised aluminium jacket |
| Монтаж | Any position, with 4 mounting holes |
| P2:P1 | 1:1 to 1.6:1 |

Указание

For information about calculating the filling times for different tank sizes, refer to the above-mentioned data sheet available on our website Прочие данные только по запросу.

Описание

Pressure multipliers (boosters) allow a separate compressed air store with up to double pressure to be installed for selected devices in a compressed air system without an external energy source, i.e. it is possible to work with a maximum pressure of 20 bar in a standard 10 bar system (maximum ratio 2:1). This is achieved using a double piston, which is operated by a combination of integrated check valves in such a way that the booster works automatically until the target pressure is reached in a compressed air tank and is then automatically switched off. A tank is always required to build up the pressure and store the compressed air!
