Popis

Purely pneumatic vacuum ejector that operates on the Venturi principle. Compressed air enters the ejector at A and flows through the nozzle B. This results in a vacuum immediately behind the nozzle outlet, and air is drawn in through the vacuum inlet D. This air and the driving air leave the ejector via the silencer C.

Dodatočné informácie

Important: Order two connection plugs per ejector. A cable set is included with the compact ejector with automatic air-saving.
