

SRS 30-100 PP

Cevna objumica, teška konstrukcija

HANSA FLEX

Osobine

| | |
|-------------------------------|---------------------------------------|
| Konstrukcija | Single pipe clamp |
| Dodatak za vrstu konstrukciju | Unutrašnja strana objumice sa rebrima |
| Seriya | težak |
| Norma | DIN 3015-2 |
| Temperatura min. | -30 °C |
| Temperatura max. | 90 °C |
| Materijal | Polipropilen |

Napomena

Za držač creva i kabla preporučuje se upotreba objumice sa glatkom unutrašnjom površinom. Montaža se odvija bez prednaprezanja, pri čemu se visina bloka H smanjuje za zazor S1.

Opis

Rebra na unutrašnjoj površini objumice prigušuju udarce i vibracije i preuzimaju aksijalne sile u cijevi. Zazor između polovica uzrokuje prednaprezanje cijevi.

Napomene u vezi porudžbine

1 komad = 2 polovice objumice
