Opis

This pushbutton panel according to EN574 Type III A is comprised of a dual manual control valve with a housing and manifold. The valve only generates an output signal if two synchronised input signals are received within < 0.4 sec. If one input signal is interrupted, the output signal is interrupted as well. An emergency stop valve with a mushroom pushbutton is included. The housing can be screwed to the wall in any position. The valve manifold can optionally be supplied without the housing and with a DIN bar adapter. Applications: Two-hand safety valve for start-of-cycle control on a pneumatically operated machine.
