

属性

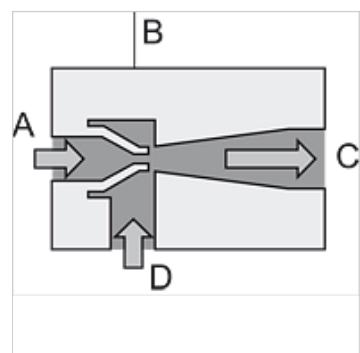

属性
 Vacuum generator with integrated control valves and system monitoring functions
 Gripping and blowing off can be controlled without the need for external valves
 Optimised air consumption thanks to many models with differing suction capacities
 Minimum energy costs in continuous operation
 Easy adjustment with foil keypad, LED display of the settings
 Minimum size and low weight
 Optimum vacuum generation directly on the suction pad
 Complete solution for very simple installation
 Short learning curve thanks to "teach" function
 No need for additional sensors
 Easily visible status indication

应用
 Ideal where space is restricted and for highly dynamic movements, handling with industrial robots, linear axes pick-and-place systems

抽真空度 85 %

基体 Anodised aluminium

集成式 NC blow-off valve, filter, silencer, non-return valve

提示

Mini-sensor with housing and connection cable, analogue or digital output signal. Minimum size and low weight combined with high measuring accuracy.
 其它数据应客户要求提供。

描述

Purely pneumatic vacuum generator that operates on the Venturi principle. Compressed air enters the ejector at A and flows through the nozzle B. This results in a vacuum immediately behind the nozzle outlet, and air is drawn in through the vacuum inlet D. This air and the driving air leave the ejector via the silencer C.

附加信息

Important: Order two connection plugs per ejector.
