K-DVST MIT REGLER

Pressure booster with regulator

属性	
入口压力	2 - 10 bar
出口压力	Max. 20 bar (regulated: max. 16 bar)
温度范围	-10 °C to +50 °C (40 mm bore), -10 °C to +60 °C (63 mm bore)
适用介质	Filtered, unlubricated or lubricated compressed air (if lubrication is used, it must be continuous)
密封材料	NBR
压力调节器	With plastic body
壳体	Aluminium, anodised
管	Anodised aluminium jacket
装配	Any position, with 4 mounting holes
P2:P1	1:1 to 1.6:1

提示

For information about calculating the filling times for different tank sizes, refer to the above-mentioned data sheet available on our website 其它数据应客户要求提供。

描述

Pressure multipliers (boosters) allow a separate compressed air store with up to double pressure to be installed for selected devices in a compressed air system without an external energy source, i.e. it is possible to work with a maximum pressure of 20 bar in a standard 10 bar system (maximum ratio 2:1). This is achieved using a double piston, which is operated by a combination of integrated check valves in such a way that the booster works automatically until the target pressure is reached in a compressed air tank and is then automatically switched off. A tank is always required to build up the pressure and store the compressed air!
